Subject: Draft book chapter on innovations in pesticide risk assessment for pollinators
Attachments: Chapter 15 - Schmehl et al._v.4.docx

Dear Tom,

This is incredibly close to the deadline for submission (30 Nov) and there are still some portions that need to be completed (Toxicogenomics, formatted references throughout, closing paragraph), however I want to give you the opportunity to get a first look at the chapter I developed in collaboration with my co-authors to capture the innovations that have taken place over the past decade to reduce non-target pesticide effects and exposure to pollinators. There is no expectation on my part that you will provide feedback (the chapter cannot possibly be more entertaining than your Thanksgiving dinner), but any big-picture or detailed feedback on the draft chapter from your perspective is appreciated. Please do not distribute at this time, given that it still has to go through the peer-review process and is not yet complete.

Thank you for your support.

Best Regards / Mit freundlichen Grüßen,
Dan
